Office Action Summary

1. This action is supplemental to the last Office action which crossed in the mail with applicants' amendment of September 13, 2001. Applicants' period of response is restarted with the mailing of this action.
2. Claim 49 is rejected under 35 USC 102(b) as being anticipated by any of the patents to Usami et al. (USP 4,644,376), Nakamura et al. (JP 01-141786) or Nakamura et al. (JP 02-145560).
3. Claims 49, 56-58, 77-79 and 81-83 are rejected under 35 U.S.C. 103(a) as being unpatentable over any of the patents to Usami et al., Nakamura et al. '786 or Nakamura et al. '560.

These patents all teach heat-sensitive recording material which can employ N-(2-hydroxyphenyl)-p-toluene sulfonamide as a color developer (see column 7, lines 9 and 10). The Nakamura et al. patents additionally suggest N-(4-hydroxyphenyl)benzenesulfonamide as a color developer. Use of a mixture of sulfonamide color developers which perform the same function would have been obvious to one of ordinary skill in this art in the absence of unexpected. In re Crockett, 126 USPQ 186. USP of the position isomer [i.e., N-(4-hydroxyphenyl) -p-toluenesulfonamide] of Usami et al.'s N-(2-hydroxyphenyl)-p-toluenesulfonamide would have been obvious expedient to one of ordinary skill in this art. In re Mehta, 146 USPQ 284. Finally, the experimental modification of the prior art in order to ascertain optimum operating conditions (e.g., determine

the composition of the paper substrate) fails to render applicants claims patentable in the absence of unexpected results.

4. Claims 50-55,59,67-76 and 80 are rejected under 35 U.S.C. 103(a) as being unpatentable over either of the patents to Usami et al. or Nakamura et al. in view of applicants' statement of the prior art.

The primary references apply as per the preceding paragraph. Applicants acknowledge in their specification that pigment/adhesive undercoatings, UV stabilizers, phosphoric esters and aromatic isocyanates are conventional materials employed in heat-sensitive recording material. Use of these conventional materials for their concomitant function in the heat-sensitive recording material of any of the primary references would have been obvious to one of ordinary skill in this art in the absence of unexpected results.
